PROFESSIONAL SUMMARY

B.Tech Computer Science student (2nd year, 2024–2028) at Aliah University with a strong foundation in full-stack MERN development, Data Structures & Algorithms in C++, and a growing interest in AI/ML. Demonstrated ability to architect and deliver production-grade web applications end-to-end, from database design to responsive React UIs. Solved 100+ competitive programming problems on LeetCode and GFG, maintaining a consistent daily coding streak. Actively seeking an internship or project-based role to contribute meaningful engineering work, sharpen skills under mentorship, and grow toward a software engineering career at a product-driven technology company.

TECHNICAL SKILLS

Languages: C++ (proficient), JavaScript (ES6+), Python (working knowledge), HTML5, CSS3

Frontend: React.js, Responsive Design, Component-Based Architecture, Markdown rendering

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, Socket.io

Databases: MongoDB, MongoDB Atlas, Mongoose ODM

Tools & Platforms: Git, GitHub, VS Code, Postman, Vercel, Render, npm

CS Fundamentals: Data Structures & Algorithms, OOP, Recursion, Trees, Linked Lists, Arrays

Soft Skills: Problem-solving, Effective Communication, Teamwork, Adaptability, Growth Mindset

PROJECTS

Train Seat Booking System | *MongoDB, Express.js, React.js, Node.js, Socket.io, Razorpay* In Development

- Architected a full-stack real-time train seat reservation platform with live seat availability updates leveraging Socket.io WebSocket connections, enabling concurrent users to view and reserve seats without page refresh.
- Designed a normalized MongoDB schema to model trains, routes, seats, and reservations, ensuring data integrity across concurrent booking sessions and preventing double-booking via transactional logic.
- Integrated Razorpay payment gateway in test mode to simulate end-to-end secure checkout flows, handling order creation, signature verification, and webhook event processing on the Node.js backend.
- Built an interactive React seat-map UI with real-time state synchronization, distinguishing available, reserved, and selected seats visually to reduce user booking time and errors.
- Implemented RESTful API endpoints with Express.js and secured all protected routes using JWT-based middleware, ensuring authenticated access control across the booking workflow.

Full-Stack Blog Platform | *MongoDB, Express.js, React.js, Node.js, JWT, Markdown, Vercel, Render* 2024

- Developed a multi-user personal blogging platform supporting rich-text authoring via a Markdown editor, rendering formatted posts client-side for a seamless reading experience.
- Engineered a comment system with nested threading, enabling authenticated users to post, edit, and delete comments, increasing user engagement and content interaction.
- Secured the platform using JWT-based authentication with httpOnly cookie storage, protecting user sessions and preventing unauthorized content modification.
- Deployed the React frontend to Vercel and the Node.js/MongoDB backend to Render, establishing a CI-friendly deployment pipeline with zero-downtime production releases.

Task Management App (Todo) with Authentication | *React.js, Node.js, Express.js, MongoDB, JWT* 2024

- Built a full CRUD task management application with user-specific data isolation, implementing create, read, update, and delete operations on a MongoDB Atlas cloud database.
- Implemented secure user registration and login flows with bcrypt password hashing and JWT token issuance, ensuring credential safety and stateless session management.
- Designed a clean, responsive React interface with real-time task status toggling and filtering by completion state, improving task visibility and personal productivity tracking.

COMPETITIVE PROGRAMMING & ALGORITHMIC PRACTICE

- Solved **100+ problems** across LeetCode and GeeksforGeeks, with consistent focus on arrays, strings, trees, linked lists, recursion, and dynamic programming paradigms.
- Completed the **Apna College C++ & DSA** course (2025), covering advanced data structures including heaps, graphs, tries, and segment trees with implementation from scratch in C++.
- Maintains a **daily coding streak**, conducting peer code reviews to reinforce algorithmic reasoning, identify optimization opportunities, and develop a habit of writing clean, maintainable code.

- Applying DSA knowledge to back-end system design decisions, including efficient data retrieval patterns and query optimization strategies in MongoDB for project development.

EDUCATION

Aliah University — Kolkata, West Bengal
Bachelor of Technology in Computer Science & Engineering

2024 – 2028
Currently Enrolled

- Coursework includes: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, and Discrete Mathematics.
- Actively developing portfolio projects in parallel with academic curriculum to bridge theoretical knowledge with real-world full-stack engineering practice.

Ramakrishna Mission Vidyapith, Purulia
Higher Secondary Certificate (12th Grade) — Science Stream

2021 – 2023
87%

- Completed senior secondary education with a strong performance in Physics, Chemistry, Mathematics, and Computer Science, providing a rigorous foundation for engineering studies.

CERTIFICATIONS

C++ & Data Structures and Algorithms | *Apna College*
Frontend Web Development | *Udemy*

Completed, 2025
In Progress

ACHIEVEMENTS & PROFESSIONAL STRENGTHS

- **Full-Stack Delivery:** Independently conceptualized, designed, and deployed multiple MERN-stack applications covering authentication, real-time features, and cloud deployment pipelines.
- **Algorithmic Thinker:** Sustained 100+ problem-solving streak across competitive programming platforms; consistently applies DSA concepts to practical application design decisions.
- **Rapid Technology Adoption:** Demonstrated agility transitioning from C++ systems programming to modern JavaScript full-stack development and exploring ML tooling within a single academic year.
- **Collaborative Team Member:** Active participant in peer code-review sessions, demonstrating communication skills and commitment to shared code quality standards.
- **Self-Directed Learner:** Pursues parallel certifications and personal projects beyond university curriculum, reflecting professional-grade motivation and discipline.
